

# FEED GRADE MPG

## FEMAS ASSURED SUPPLIER OF MPG

Feed grade MPG (Monopropylene Glycol) from Monarch Chemicals has been tailor made for livestock applications.

Along with its many inherent benefits, primarily MPG works to assist in the formation of glucose to rebalance negative energy experienced in dairy cattle, particularly during periods of calving.

This product can be administered to dairy cows orally via drencher, in conjunction with a robotic system or mixed with feed where it has the added benefit of also enhancing the palatability of animal feeds.

## AVAILABILITY

Feed grade MPG is a clear, odourless, water soluble hygroscopic liquid with a purity of greater than 99.7%.

It is available in 25kg poly, 200kg plastic drum and 1,000kg IBC, remaining stable in normal conditions for up to two years.

European produced MPG from Monarch Chemicals has been registered and assured to the internationally recognised FEMAS standard.

## Benefits of using MPG

- Tailor made for livestock feed applications
- Energy value of 23.6 Mj/Kg
- Serves as a readily available energy source in ketosis treatment and prevention
- Helps to enhance the palatability of animal feeds

## Benefits of choosing Monarch Chemicals

- We deliver direct to farms eliminating storage concerns
- Our fleet is ADR compliant and approved
- FEMAS assured products
- Our MPG is in stock now and ready for dispatch
